Bulletin Number: PB-0002

## BUMPER BOTTOM FLANGE CONDITIONS

- Valley Chrome's bumper bottom flanges (the underside of bumpers that faces ground when installed on a truck) are not fully finished.
- Polishing the bottom flanges would add significant cost to our production process, add lead time to manufacturing and would result in higher product costs to dealers and distributors.
- The bottom flanges are not seen from a standard viewing location on trucks after installation.

**The following conditions are normal and are not warranted:**

Typical **TOP** flange shown here. Top flanges are warranted for a highly polished finish, unlike bottom flanges.
